Tuesday, 02 October 2007

The last announced astf T.E.C.H. toy has hit retail stores, according to several reports. Just like the rest of the "Transformers Electronic Combat Hardware" line, Autofire is an everyday gadget that converts into a kid-size deadly weapon. Though in his particular case, certain Florida lawyers might argue that his video game controller mode is far deadlier than the laser gun he changes into.

The first sighting was reported at TFW2005. Discuss the toy in Nevermore's thread, and don't forget to post your sightings here!
